

ABSTRACT OF THE DISCLOSURE

5 A fishing pole holder mounting system for permitting fishing
pole holders to be mounted to a rear of a boat. The fishing pole
holder mounting system includes a support member comprising a
medial portion and a plurality of mounting portions. The medial
portion is positioned between the mounting portions. The mounting
10 portions of the support member are designed for being selectively
coupled to the boat whereby the medial portion of the support
member extends along the rear of the boat. The medial portion is
designed for being selectively engaged by the fishing rod holders
whereby the medial portion supports fishing rods placed in the
15 fishing rod holders and allowing the fishing rods to extend
outwardly from the rear of the boat. The medial portion is coupled
to the mounting portions at an angle to allow the medial portion to
be positioned above the rear of the boat.
